DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, 9-13 and 22-26, drawn to a nucleic acid encoding an Ebola virus transmembrane form of virus glycoprotein, a first method of making and a first method of using.

Group II, claim(s) 1-5, 7, 9, 14-17 and 22-26, drawn to drawn to a nucleic acid encoding an Ebola virus secreted form of virus glycoprotein, a first method of making and a first method of using.

Group III, claim(s) 1-5, 8, 9 and 18-26, drawn to drawn to a nucleic acid encoding an Ebola virus nucleoprotein, a first method of making and a first method of using.

If applicant wishes to elect a combination of virus proteins (as recited in claim 2), applicant is required to elect a specific combination selected from the transmembrane form of virus glycoprotein, secreted form of virus glycoprotein and virus nucleoprotein. Each possible combination is patentably distinct and lacks unity of invention with group I because claim 1 is drawn to a pharmaceutical composition comprising a nucleic acid molecule encoding an Ebola virus structural gene (emphasis added). Each of the combinations would not share the same structural or functional features defining the singular nucleic acid molecule within the composition of claim 1.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature of group I is drawn to a nucleic acid encoding an Ebola virus transmembrane form of virus glycoprotein. The special technical feature of groups II and III are drawn to nucleic acids encoding an Ebola virus secreted form of virus glycoprotein and a virus nucleoprotein, respectively. Each of the groups comprise different viral antigens that elicit a

different immune response within a subject. The different Ebola virus proteins lack the same corresponding structural and functional feature defining each group.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
